

## **INNOMATICS - Programming TASK1**

**1. Here is a sample line of code that can be executed in Python:**

```
print("Hello, World!")
```

**You can just as easily store a string as a variable and then print it to stdout:**

**code:**

```
if __name__ == '__main__':
    print("Hello, World!")
```

**output:**

```
Hello, World!
```
